SUMMARY

I am a final-year Computer Science Engineering student with a growing interest in backend development and software security. Over the course of my degree, I have built a solid foundation in Core Java, SQL, JDBC, and file handling. I've applied my learning through academic projects such as a secure paper delivery system using Triple DES encryption and a resource-sharing platform (SERT Hub) that integrates chatbot features and time-based email automation. I focus on writing clean, functional code and have a strong desire to learn by doing. Currently, I'm looking for internship or entry-level opportunities where I can continue building real-world skills and contribute meaningfully as a backend or Java developer.
